Dongyang Li, PhD, PEng, FCAE, MEASA, FInstP, FIMMM
Department of Chemical and Materials Engineering, University of Alberta

1. EDUCATION:

Ph.D., Metallurgical Engineering, 1995, McGill University, Montreal, Canada
Ph.D., Materials Physics, 1990, University of Science and Technology Beijing, China
M.Sc., Condensed Matter Physics, 1985, Sun Yat-sen University, Guangzhou, China
B.Sc., Solid Mechanics, 1982, University of Science and Technology China, Hefei, China

2. POSITIONS HELD

07/2005 -	Professor	Department of Chemical & Materials Engineering, University of Alberta, Edmonton, AB, Canada
07/2002 – 06/2005	Associate Professor	Department of Chemical & Materials Engineering, University of Alberta, Edmonton, AB, Canada
01/1998 – 06/2002	Assistant Professor, NSERC Industrial Research Chair	Department of Chemical & Materials Engineering, University of Alberta, Edmonton, AB, Canada
08/1995 – 12/1997	Postdoctoral Associate	Department of Mater. Sci. and Eng., the Pennsylvania State University, PA, USA
07/1990 – 12/1991	Research Associate	Department of Metallurgical Engineering, McGill University, Montreal, QC, Canada
1985- 1986	Lecturer	Department of Physics, South China Univ. of Tech., Guangzhou, China

Others

07/2005 -	Adjunct Professor	Dept. of Bio-medical Engineering, University of Alberta
07/2022 -	Adjunct Professor	Department of Civil, Materials, and Environmental Eng., University of Illinois at Chicago
07/2023 -	Adjunct Professor	School of Materials Science and Engineering, Shandong University, Jinan, China
08/2023 – 08/2025	Adjunct Professor	Department of Mechanical, Materials and Aerospace Eng., Illinois Institute of Technology, Chicago
12/2018 - 04/2019	Specially Appointed Professor,	Department of Materials Science and Engineering, Osaka University, Japan
09/2018-07/2019	Visiting Professor	Department of Materials Science and Engineering, National Taiwan University, Taipei, Taiwan
2017 – 2020	Chutian Scholars - Professor Lectures	Wuhan University of Science and Technology, Hubei Province, China
01/2012 – 06/2012	Visiting Professor	Department of Mechanical Engineering, National University of Singapore, Singapore
08/2011 –12/2011	Visiting Professor	Department of Materials Science and Engineering, Massachusetts Institute of Technology, USA
2014 – 2017	Awardee	100-Talents Program, Taiyuan University of Science and Technology, Shanxi, China
2007 – 2016	Foreign Doctoral Advisor,	Harbin Institute of Technology, China
01-05/2005	Visiting Scientist	Biophysics, Advance Research Center, National Institute of Information and Communications Technology, Japan
07-12/2004	Visiting Associate Professor	Department of Mechanical Engineering, National University of Singapore, Singapore

3. Editorial: on editorial board for eighteen international journals

Associate Editor: Tribology section, Frontier in Mechanical Engineering
Editorial board member: Scientific Reports, Surface Science & Technology, Coatings, Metals, Materials (Guest editor), Intl. J. of Corrosion, J. of Biosensors & Bioelectronics, Tribology – Surface, Interfaces and Materials, and …..;
Former Editor-in-Chief: Intl. J. of Nano and Biomaterials, 04/2009 – 04/2022.

4. Teaching Experience

Wear and Friction of Engineering Materials (4th year undergraduate and graduate) – This course covers fundamentals of interfacial contact, wear modes and characterization, tribo-materials, surface protection, and computational modeling.

Nanomaterials for bio-medical applications (4th year undergraduate and graduate) – This course covers synthesis of nanostructured materials (bulk, films, nanoparticles), properties and characterization, and bio-medical applications of the nanostructured materials. **Note:** I was invited to offer this course at Harbin Institute of Tech. as well (summer, 2008 – 2015).

- **Solid/liquid and solid/vapot phase transformations** (3rd year undergraduate) - This course covers topics of Vapor-Solid and Liquid-Solid interfacial phenomena. V-S and L-S interfacial characteristics and phase transformations are analyzed based on local atomic interactions.

Structure of Materials (3rd year undergraduate students) – This course covers topics of crystal structure, X-ray diffraction, dislocation theory, and characterization of crystal structure and defects.

Surface Failure and Surface Engineering (4th year undergraduate, 2012-2015) – This course is developed to introduce wear, corrosion, and surface engineering techniques.

Advanced thermodynamics of materials (graduate, 2000 - 2008) - This course covers classic and statistic thermodynamic techniques with emphasis on materials issues.

Materials Science & Engineering (2nd year undergraduate, 1998 - 2012) – This is an introductory course for 2nd year students in the materials engineering program.

Physical Metallurgy (3rd year undergraduate, 1998 - 2003) – This course covers typical topics of Physical metallurgy.

Experimental techniques for materials research (graduate, 2013 - 2016) – This is a joint course, which covers typical experimental techniques for materials research, such as TEM, SEM, AFM, XPS, Auger, SIMS, DSC, etc.

5. Fellowships, Honors and Awards

- Fellow, the Canadian Academy of Engineering (FCAE)
- Member, European Academy of Sciences and Arts (MEASA)
- Fellow of the Institute of Physics (FInstP)
- Fellow of the Institute of Materials, Minerals and Mining (FIMMM)
- ScholarGPS® ranking, Dr. Li is named a ScholarGPS Highly Ranked Scholar in the top 0.05% of all scholars worldwide for his lifetime of contributions, and is ranked as #1 scholar in the field of electron work function.
- MetSoc Airey Award (Lifetime Achievement), 2025, the highest award in the field of materials and metallurgy
- IAAM Distinguished Award, 2025, International Association of Advanced Materials IAAM (Ulrika, Sweden)
- Metsoc Research Excellence Award, CIM, 2024
- Metal Physics Award, MetSoc, Canadian Institute of Mining, Metallurgy and Petroleum (CIM), 2024
- MetSoc Distinguished Materials Scientist Award, 2020, Metallurgy & Materials Society of CIM
- Awardee of Top100 Talent Program, Shanxi, China, 2014-2017.
- Awardee of Chutian Scholars Program - Professor Lectures, Hubei province, China, 2017-2020

- NSERC Industrial Research Chair, 1998-2002, Canada
- Honorary Professorship (Lifetime), Jinan University, Guangzhou, China, 2021
- Specially Appointed Professor, 2019, Osaka University, Japan
- Awardee of National Major High-end Foreign Talents Program (2018, 2020, 2023), the Ministry of Science and Technology, China.
- MOST Fellowship, awarded by the Ministry of Science and Technology, R.O.C (Taiwan), 2018/2019
- RWTH Aachen – University of Alberta Senior Research Fellow, 2020
- JMST2020 Excellent Article Award (J. of Mater. Sci. & Technol.), 2020
- Best Paper Award, 5th International Conference of Theoretical and Applied Nanoscience and
- Best Paper Award, Nanotechnology (TANN'21) May 23 -25, 2021, Niagara Falls, Canada.
- Ken Ludema Best Paper Award, 18th Intl. Conf. on Wear of Materials, Philadelphia, USA, 2011.
- Best Paper Award, Canadian Materials Science Conference 2008
- Imperial Oil University Research Award, 2000 – 2015
- Best Paper Award, Intl. Conf. on Mater. Sci., Nov., 1989

6. Research Areas

Dr. D.Y. Li has conducted extensive research in materials science & engineering with focus on tribo-materials and wear control in a wide range of topics: 1) the correlation between the electron behaviour and material properties, and development of electron work function – based methodology for material design towards Electronic Metallurgy; 2) develop hybrid high-entropy ferrous alloys against wear in oil sands mining and pipeline systems; 3) advanced tribo-materials, wear and corrosion control, 4) computational materials science and tribology, 5) bacteria-metal surface interaction, and photocatalytic films. Since joined University of Alberta, Dr. Li has developed a highly recognized Wear and tribo-materials program. He has in excess of 570 scientific publications including 530+ referred journal publications. Dr. Li is an invited contributor for authoritative handbooks/encyclopaedias (Elsevier, Springer, ASM International). The following are research subjects of his studies:

<u>Development of electron work function (EWF) – based methodology for material design:</u>

-- Correlation between work function and mechanical and electrochemical properties of materials
-- Work function, surface adhesion behavior, and the affinity of materials for bacterial biofilms
-- Electron work function for nano-tribological diagnosis
-- Interfacial work function and interfacial bond strength of materials
-- EWF-based new framework for material design and modification
-- EWF mapping (AFM) and corresponding mapping of other properties for material manipulation.

<u>Materials behavior in surface tribological failure processes</u>:

-- High-entropy materials for wear control and components in small modular nuclear reactors
-- Novel tribo-materials with structural hierarchy and self-stress adjusting capability
-- Surface alloying and nanocrystallization for enhanced resistances to corrosion, wear and corrosive wear
-- Shape memory alloy – based pseudoelastic tribo-materials, including alloys and composites
-- Dislocation dynamics and effects of strain rate on wear in aggressive environments
-- Corrosion-wear synergy, high-T wear and control using rare-earth elements
-- Quantitative determination of interfacial bond strength of protective coatings and composites

<u>Computational materials science and surface processes</u>

-- First-principles calculation of electron work function and corresponding material and interfacial properties
-- Computational studies on complex carbides and high-entropy ceramic materials
-- Molecular dynamic simulation of structure evolution and the mechanical behavior of nano-material systems
-- First-principles and MD modeling of growth and properties of corrosion inhibitor – induced protective films
-- Microtubule motion, the coordination of biological motors and related statistic problems
-- Investigate wear, corrosive wear and friction using a micro-scale dynamic model (MSDM)
-- Phase-field modeling microstructure evolution, and simulation of textural growth

Biological surface interactions and materials

-- Interaction between bio-films and surface of implant materials and related electronic mechanisms
-- Reduction in electron activity by surface nanocrystallization of implants to diminish bio-films' adherence
-- Surface nanocrystallization with anti-bacteria agents for control bacterial biofilms on solids
-- Investigation of dynein protein–microtubule interaction for potential nano-bio-machine systems
-- Self-organization sliding of microtubules driven by biological motors

Surface phenomena related to photocatalytic nanotubular films and techniques

-- *in situ* thermo-electrochemical synthesis of TiO_2 nanotubular films for effective solar energy utilization
-- Solar spectrum analysis and the efficiency of solar energy conversion based on *in situ* EWF monitoring
-- Degradation of toxic organic substances by photocatalytic nanotubular films
-- Relation between work function and photocatalytic behavior of element-doped TiO_2 nanotubular films
-- Develop an electron work function – light illumination technique for photocatalytic film characterization
-- Conductive peptide incorporated TiO_2 nanotubes with improved mechanical and photocatalytical properties
