

**Dongyang Li, PhD, PEng, FCAE, MEASA, FInstP, FIMMM**  
**Department of Chemical and Materials Engineering, University of Alberta**

## 1. EDUCATION:

Ph.D., Metallurgical Engineering, 1995, McGill University, Montreal, Canada

Ph.D., Materials Physics, 1990, University of Science and Technology Beijing, China

M.Sc., Condensed Matter Physics, 1985, Sun Yat-sen University, Guangzhou, China

B.Sc., Solid Mechanics, 1982, University of Science and Technology China, Hefei, China

## 2. POSITIONS HELD

07/2005 - present	Professor	Department of Chemical & Materials Engineering, University of Alberta, Edmonton, AB, Canada
07/2002 – 06/2005	Associate Professor	Department of Chemical & Materials Engineering, University of Alberta, Edmonton, AB, Canada
01/1998 – 06/2002	Assistant Professor, NSERC Industrial Research Chair	Department of Chemical & Materials Engineering, University of Alberta, Edmonton, AB, Canada
08/1995 – 12/1997	Postdoctoral Associate	Department of Mater. Sci. and Eng., the Pennsylvania State University, PA, USA
07/1990 – 12/1991	Research Associate	Department of Metallurgical Engineering, McGill University, Montreal, QC, Canada
1985- 1986	Lecturer	Department of Physics, South China Univ. of Tech., Guangzhou, China

## Others

2005 - Present	Adjunct Professor	Dept. of Bio-medical Engineering, University of Alberta
08/2023 -	Adjunct Professor	Department of Mechanical, Materials and Aerospace Eng., Illinois Institute of Technology, Chicago
07/2023 -	Adjunct Professor	School of Materials Science and Engineering, Shandong University, Jinan, China
07/2022 -	Adjunct Professor	Department of Civil, Materials, and Environmental Eng., University of Illinois at Chicago
12/2018 - 04/2019	Specially Appointed Professor,	Department of Materials Science and Engineering, Osaka University, Japan
09/2018-07/2019	Visiting Professor	Department of Materials Science and Engineering, National Taiwan University, Taipei, Taiwan
2017 – 2020	Chutian Scholars - Professor Lectures	Wuhan University of Science and Technology, Hubei Province, China
01/2012 – 06/2012	Visiting Professor	Department of Mechanical Engineering, National University of Singapore, Singapore
08/2011 – 12/2011	Visiting Professor	Department of Materials Science and Engineering, Massachusetts Institute of Technology, USA
2014 – 2017	Awardee	100-Talents Program, Taiyuan University of Science and Technology, Shanxi, China
2007 – 2016	Foreign Doctoral Advisor,	Harbin Institute of Technology, China
01-05/2005	Visiting Scientist	Biophysics, Advance Research Center, National Institute of Information and Communications Technology, Japan
07-12/2004	Visiting Associate Professor	Department of Mechanical Engineering, National University of Singapore, Singapore

### 3. Editorial: on editorial board for eighteen international journals

**Associate Editor:** Tribology section, Frontier in Mechanical Engineering

**Editorial board member:** Scientific Reports, Coatings, Metals, Materials (Guest editor), Intl. J. of Corrosion, J. of Biosensors & Bioelectronics, Tribology – Surface, Interfaces and Materials, and .....

**Former Editor-in-Chief:** Intl. J. of Nano and Biomaterials, 04/2009 – 04/2022.

### 4. Teaching Experience

**Wear and Friction of Engineering Materials** (4<sup>th</sup> year undergraduate and graduate) – This course covers fundamentals of interfacial contact, wear modes and characterization, tribo-materials, surface protection, and computational modeling.

**Nanomaterials for bio-medical applications** (4<sup>th</sup> year undergraduate and graduate) – This course covers synthesis of nanostructured materials (bulk, films, nanoparticles), properties and characterization, and bio-medical applications of the nanostructured materials. **Note:** I was invited to offer this course at Harbin Institute of Tech. as well (summer, 2008 – 2015).

**Solid/liquid and solid/vapour phase transformations** (3<sup>rd</sup> year undergraduate) - This course covers topics of Vapor-Solid and Liquid-Solid interfacial phenomena. V-S and L-S interfacial characteristics and phase transformations are analyzed based on local atomic interactions.

**Structure of Materials** (3<sup>rd</sup> year undergraduate students) – This course covers topics of crystal structure, X-ray diffraction, dislocation theory, and characterization of crystal structure and defects.

**Surface Failure and Surface Engineering** (4<sup>th</sup> year undergraduate, 2012-2015) – This course is developed to introduce wear, corrosion, and surface engineering techniques.

**Advanced thermodynamics of materials** (graduate, 2000 - 2008) - This course covers classic and statistic thermodynamic techniques with emphasis on materials issues.

**Materials Science & Engineering** (2<sup>nd</sup> year undergraduate, 1998 - 2012) – This is an introductory course for 2<sup>nd</sup> year students in the materials engineering program.

**Physical Metallurgy** (3<sup>rd</sup> year undergraduate, 1998 - 2003) – This course covers typical topics of Physical metallurgy.

**Experimental techniques for materials research** (graduate, 2013 - 2016) – This is a joint course, which covers typical experimental techniques for materials research, such as TEM, SEM, AFM, XPS, Auger, SIMS, DSC, etc.

### 5. Fellowships, Honors and Awards

Fellow, the Canadian Academy of Engineering (FCAE)

Member, European Academy of Sciences and Arts (MEASA)

Fellow of the Institute of Physics (FInstP)

Fellow of the Institute of Materials, Minerals and Mining (FIMMM)

Metsoc Research Excellence Award, CIM, 2024

Metal Physics Award, MetSoc, Canadian Institute of Mining, Metallurgy and Petroleum (CIM), 2024

MetSoc Distinguished Materials Scientist Award, 2020, Metallurgy & Materials Society of CIM

Awardee of Top100 Talent Program, Shanxi, China, 2014-2017.

Awardee of Chutian Scholars Program - Professor Lectures, Hubei province, China, 2017-2020

NSERC Industrial Research Chair, 1998-2002, Canada

Honorary Professorship (Lifetime), Jinan University, Guangzhou, China, 2021

Specially Appointed Professor, 2019, Osaka University, Japan

Awardee of National Major High-end Foreign Talents Program (2018, 2020, 2023), the Ministry of

Science and Technology, China.

MOST Fellowship, awarded by the Ministry of Science and Technology, R.O.C (Taiwan), 2018/2019

RWTH Aachen – University of Alberta Senior Research Fellow, 2020

JMST2020 Excellent Article Award (J. of Mater. Sci. & Technol.), 2020

Best Paper Award, 5th International Conference of Theoretical and Applied Nanoscience and

Best Paper Award, Nanotechnology (TANN'21) May 23 -25, 2021, Niagara Falls, Canada.

Ken Ludema Best Paper Award, 18th Intl. Conf. on Wear of Materials, Philadelphia, USA, 2011.

Best Paper Award, Canadian Materials Science Conference 2008

Imperial Oil University Research Award, 2000 – 2015

Best Paper Award, Intl. Conf. on Mater. Sci., Nov., 1989

## 6. Research Areas

Dr. D.Y. Li has conducted extensive research in materials science & engineering with focus on tribo-materials and wear control in a wide range of topics: 1) the correlation between the electron behaviour and material properties, and development of electron work function – based methodology for material design towards Electronic Metallurgy; 2) develop hybrid high-entropy ferrous alloys against wear in oil sands mining and pipeline systems; 3) advanced tribo-materials, wear and corrosion control, 4) computational materials science and tribology, 5) bacteria-metal surface interaction, and photocatalytic films. Since joined University of Alberta, Dr. Li has developed a highly recognized Wear and tribo-materials program. He has in excess of 480 scientific publications including 430+ referred journal publications. Dr. Li is an invited contributor for authoritative handbooks/encyclopaedias (Elsevier, Springer, ASM International). The following are research subjects of his studies:

### Development of electron work function (EWF) – based methodology for material design:

- Correlation between work function and mechanical and electrochemical properties of materials
- Work function, surface adhesion behavior, and the affinity of materials for bacterial biofilms
- Electron work function for nano-tribological diagnosis
- Interfacial work function and interfacial bond strength of materials
- EWF-based new framework for material design and modification
- EWF mapping (AFM) and corresponding mapping of other properties for material manipulation.

### Materials behavior in surface tribological failure processes:

- High-entropy materials for wear control and components in small modular nuclear reactors
- Novel tribo-materials with structural hierarchy and self-stress adjusting capability
- Surface alloying and nanocrystallization for enhanced resistances to corrosion, wear and corrosive wear
- Shape memory alloy – based pseudoelastic tribo-materials, including alloys and composites
- Dislocation dynamics and effects of strain rate on wear in aggressive environments
- Corrosion-wear synergy, high-T wear and control using rare-earth elements
- Quantitative determination of interfacial bond strength of protective coatings and composites

### Computational materials science and surface processes

- First-principles calculation of electron work function and corresponding material and interfacial properties
- Computational studies on complex carbides and high-entropy ceramic materials
- Molecular dynamic simulation of structure evolution and the mechanical behavior of nano-material systems
- First-principles and MD modeling of growth and properties of corrosion inhibitor – induced protective films
- Microtubule motion, the coordination of biological motors and related statistic problems
- Investigate wear, corrosive wear and friction using a micro-scale dynamic model (MSDM)
- Phase-field modeling microstructure evolution, and simulation of textural growth

### Biological surface interactions and materials

- Interaction between bio-films and surface of implant materials and related electronic mechanisms
- Reduction in electron activity by surface nanocrystallization of implants to diminish bio-films' adherence
- Surface nanocrystallization with anti-bacteria agents for control bacterial biofilms on solids

- Investigation of dynein protein–microtubule interaction for potential nano-bio-machine systems
- Self-organization sliding of microtubules driven by biological motors

#### Surface phenomena related to photocatalytic nanotubular films and techniques

- *in situ* thermo-electrochemical synthesis of TiO<sub>2</sub> nanotubular films for effective solar energy utilization
- Solar spectrum analysis and the efficiency of solar energy conversion based on *in situ* EWF monitoring
- Degradation of toxic organic substances by photocatalytic nanotubular films
- Relation between work function and photocatalytic behavior of element-doped TiO<sub>2</sub> nanotubular films
- Develop an electron work function – light illumination technique for photocatalytic film characterization
- Conductive peptide incorporated TiO<sub>2</sub> nanotubes with improved mechanical and photocatalytic properties
